Please speak to an ABR representative in regards to coils.

Wrap around jacket protects coil from the elements. Air is expelled upward and away from bushes and shrubs, preserving landscaping. Grille/Motor mount protects the motor from the elements. All controls are accessible by removing on service panel. Compressor compartment provides additional protection from the elements and reduces operating noise. The single speed, 6 pole fan motor provides a low speed energy saving operation. The unit also includes a non-cycling reversing valve and demand defrost.
